LESSON EXEMPLAR

LESSON EXEMPLAR			
Learning Area	General Science	Grade Level	11
Semester	2 nd	Quarter	3
I. OBJECTIVES <i>(Identifying the Goals)</i>			
Content Standard	All levels of life have systems of related parts;		
Performance Standard	Create a presentation using chosen multimodal activities (e.g., forum, infographic, podcast, vlog, etc.) to effectively communicate key concepts about the effects of climate change on the local ecosystem in the learners' community.		
Learning Competencies	The learners ... Explain using photographs or videos of simple plants or animals as examples how life forms operate as systems of related parts working together;		
II. REFERENCES and MATERIALS <i>(Selecting Resources and Material)</i>	Department of Education. (2021). Earth and Life Science Quarter 2 – Module 2: Unifying Themes in the Study of Life. Lingcol, R. (n.d.). Unifying themes in the study of life [Presentation]. SlideShare. https://www.slideshare.net/slideshow/unifying-themes-in-the-study-of-life/241817637 Studocu. (n.d.). Lesson 1: Unifying Themes of Life – Earth & Life Science Q2.		
<i>(These shall be accomplished per topic)</i>			
III. CONTENT <i>(Sequencing Content)</i>	Unifying Themes of Life Science		
IV. OBJECTIVES <i>(Setting Clear Objectives and Analyzing the Tasks)</i>	1. Identify the major systems and their components in both plants and animals. 2. Describe how these components interact and function together as systems that sustain life. 3. Explain how shown pictures or videos illustrate systems of related parts operate in plants or animals.		

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

V. PROCEDURES <i>(Selecting Strategies, Making Meaningful Content, Delivering Lesson and Assessing Learning)</i> This section focuses on selecting learner-centered, evidence-based instructional approaches such as problem-based learning, collaborative tasks, interdisciplinary integration, and technology-enhanced instruction. These strategies are intended to foster active engagement, critical thinking, and adaptability across diverse learning pathways. The chosen approaches and methodologies will be reflected through varied and relevant activities and assessments that emphasize real-world relevance and application, thereby enhancing learner engagement and comprehension. (Each part shall have 2-3 varied activities)		ANNOTATION <i>*Instruction to teacher on how to facilitate the activities.</i> <i>*In the Annotation, explicitly explain how the IDF is applied in each part of the lesson</i>
A. Activation Prior Knowledge	Activity Title: “System Match-Up & Life Link Reflection” Step-by-Step Activity: Materials Needed: - Printed or digital cards with names of systems and components (e.g., “Circulatory System – Heart,” “Root System – Xylem”) - A curated set of images or short video clips showing plant and animal systems in action (e.g., blood flow, photosynthesis, nutrient transport) “Life Link” reflection sheets 1. Warm-Up Prompt (5 min) Ask learners: <i>“Imagine your body or a plant as a city. What systems keep it alive and running smoothly? Jot down any systems or parts you remember.”</i>	The match-up task prompts learners to recall previously learned systems (e.g., circulatory, root, digestive) and their components. By sorting and categorizing, students restructure existing knowledge, preparing their minds for deeper integration and new connections. Materials: For digital cards (may search from the following links - Human systems : http://bit.ly/47cOBV1 - Plant and other animals organ system: https://bit.ly/3WczKoD For short video clips, teacher may search from the links below:

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

Let them brainstorm individually or in pairs. Encourage metaphors (e.g., “Roots are like water pipes”). 2. System Match-Up Challenge (10 min) Distribute shuffled cards with system names and their components. In groups, students: • Match each system to its correct components. • Categorize cards into “Plant Systems” and “Animal Systems.” • Predict how at least one plant and one animal system might interact with others to sustain life. • Extension: Include “mystery cards” with functions (e.g., “transports nutrients”) and ask students to match them to the correct system. 3. Visual Decode (10 min) • Show selected images or short clips (e.g., root absorption, heart pumping, leaf cross-section). For each: Ask: “What system is shown? What parts are working together?” • Encourage students to annotate or sketch the system and label components. 4. Life Link Reflection (5 min) Each student completes a short reflection: <i>“Choose one system from today’s activity. How does it remind you of something in your own life—your routines, relationships, or responsibilities?”</i>	• Photosynthesis: https://bit.ly/4o4WAuU • Animal respiration: https://bit.ly/4hjbW0D Step-by-Step Facilitation 1. Welcome & Warm-Up (5 min) Prompt: “Imagine your body or a plant as a city. What systems keep it alive and running smoothly?” Invite students to brainstorm individually or in pairs • Encourage metaphors (e.g., “Roots are like water pipes”) • Record a few responses on the board to prime thinking 2. System Match-Up Challenge (10 min) Instructions: • Distribute shuffled cards to small groups (3–4 students) • Students match systems to correct components and functions • Ask them to sort into “Plant Systems” and “Animal Systems” Encourage discussion: • “How do these parts work together?” • “What happens if one part fails?”
---	--

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

		Facilitator Tips: • Circulate and listen for misconceptions or insightful connections • Prompt deeper thinking with questions like: a. Why do you think this component belongs here?” b. Can you think of a real-life example of this system in action?” 3. Visual Decode (5–7 min) • Show selected images or clips of biological systems Ask: a. “What system is shown?” b. “Which components are interacting?” c. “What’s the function being carried out?” Tips for teachers Encourage students to annotate or sketch what they see • Highlight systems thinking: “Notice how no part works alone—what does that tell us?” 4. Life Link Reflection (5–7 min) Instructions: • Distribute reflection sheets or invite journal writing
--	--	--

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

- **Prompt:** “Choose one system from today’s activity. How does it remind you of something in your own life—your routines, relationships, or responsibilities?”

Tips for teachers:

Frame this as a personal insight, not a test

Offer examples like:

- “The circulatory system reminds me of how communication flows in a team.”
- “Roots remind me of my family—quiet but essential.”

5. Optional Whole-Class Wrap-Up (5 min)

Prompt: “What’s one insight you’re taking away—not just as a student, but as a person?”

- Invite 2–3 volunteers to share
- Affirm contributions and connect them back to the lesson’s objectives

Differentiation & Extensions

- For advanced learners: Add “mystery cards” with abstract functions
- For visual learners: Use diagrams or concept maps
- For values integration: Link systems to themes like empathy, resilience, or stewardship

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

B. Instituting New Knowledge	Activity Title: Picture This: Systems at Work Materials Needed • Printed pictures or short video clips of: • A flowering plant (roots, stem, leaves, flowers visible) • A human body system diagram (e.g., circulatory, respiratory) • Optional: short video of plant tropism or animal respiration • Chart paper or worksheet with guiding questions • Markers or pens Instructions for Students Step 1: Observe (5 minutes) • Look closely at the provided picture or video of either a plant or an animal system. • Note down the major system(s) you see and label their components (e.g., roots, xylem, lungs, heart). Step 2: Analyze (10 minutes) • In pairs or small groups, discuss: • How do these components work together as a system? • What basic need of life does this system address (nutrients, gas exchange, reproduction, waste removal, response to stimuli)? • How is this similar or different from the way the other kingdom (plant vs. animal) meets the same need? Step 3: Apply (10 minutes) • On chart paper or your worksheet, complete the following questions: 1. System Identified: _____ 2. Main Components: _____ 3. How They Work Together: _____	Activity Title: Picture This: Systems at Work This activity blends visual analysis, group collaboration, and real-life application, ensuring learners don't just memorize systems but see their relevance. Teacher Wrap up Tips for the Activity: 1. Synthesize Key Points • Summarize the main systems compared (nutrient transport, gas exchange, reproduction, response to stimuli, waste removal). • Highlight one big similarity (e.g., both plants and animals transport nutrients) and one big difference (e.g., plants rely on passive transport, animals on active pumping). 2. Connect to the Objectives • Revisit the lesson goals explicitly: • "Today you identified the major systems in plants and animals." • "You described how their parts interact to sustain life." • "You explained how visuals helped us see these systems in action." This reinforces that the objectives were achieved.
--	---	---

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

	4. Life Need Addressed: _____ 5. Comparison (Plant vs. Animal): _____ 6. Real-Life Application: How does understanding this system help us in daily life, health, or environmental care? Step 4: Share (5 minutes) • Each group presents one key insight: • A surprising similarity or difference between plant and animal systems, OR • A practical application of this knowledge in real life. Option 2 Activity Title: “System Showdown: Plants vs. Animals Step 1: Warm Up Brainstorms (5-10 minutes)	3. Invite Student Reflection Ask quick exit prompts: • “What’s one system you understand better now?” • “What’s one surprising similarity or difference you discovered?” • “How can this knowledge help you in real life?” 4. Emphasize Practical Application Link back to daily life: • Caring for plants → understanding water/nutrient transport. • Human health → importance of circulatory and respiratory systems. • Environmental awareness → plants and animals as interdependent systems. 5. Celebrate Collaboration Acknowledge group effort: “Notice how much more we uncovered by pooling our ideas—science is collaborative, just like this activity.” Option 2: Activity Title: “System Showdown: Plants vs. Animals The activity aims to:
--	--	--

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

Learners list basic needs (e.g., water, nutrients, gas exchange, reproduction) and the systems that meet those needs (e.g., roots, leaves, digestive system, circulatory system).

Step 2: Group Analysis (15–20 minutes)

Divide learners into small groups. Each group receives a **comparison chart** with categories like:

Function	Plant System	Animal System
Nutrient Transport	Xylem and Phloem	Circulatory System
Gas Exchange	Stomata	Lungs. gills
Reproduction	Flowers, seeds	Reproductive organs
Response to stimuli	Tropism	Nervous System
Waste Removal	Leaf drop, transpiration	Excretory system

Task:

- Fill in the chart using prior knowledge, textbook, or visual aids
- Highlight **similarities** (e.g., both transport nutrients)
- Note **differences** in structure and complexity
-

Step 3: Class Discussion (15 minutes)

Facilitate a whole-class discussion using guiding questions:

- “What functions are common to both plants and animals?”
- “How do their systems achieve these functions differently?”
- “Which system surprised you the most?”

- To help learners analyze and compare how plant and animal systems function, maintain balance, and support life—while fostering collaborative dialogue and critical thinking.

Teacher prompts :

“What do plants and animals need to survive? What systems help them do that?”

Teacher may record responses on the board under two columns: Plant Systems and Animal Systems.

Teacher Wrap up tips for the Activity:

1. Revisit the Objectives

- Briefly restate what learners accomplished: *“Today you identified the major systems in plants and animals, compared how they function, and reflected on what these similarities and differences tell us about life.”*
- This reinforces that the activity had a clear purpose and that the goals were met.

2. Highlight Key Takeaways

- Emphasize common functions (nutrient transport, gas exchange, reproduction, waste removal, response to stimuli).

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

	• “What does this tell us about how life adapts to different environments?” Encourage learners to defend their comparisons and ask questions across groups. Step 4: Values Connection (Optional Extension) Ask learners to reflect: “What can we learn from plant and animal systems about balance, cooperation, and adaptation?” They can share insights like: • “Even simple systems have complex roles.” • “Balance is essential—whether in a leaf or a lung.” • “Every part has a purpose, just like in a team.”	• Point out different strategies: plants rely on slower, structural processes; animals often use faster, specialized organs. • Stress the big idea: Different structures, same survival goals. 3. Encourage Reflection • Use quick prompts to consolidate learning: • “What’s one similarity between plants and animals that surprised you?” • “What’s one difference that stood out?” • “How does this change the way you see living things?” 4. Connect to Values Tie the science back to life lessons: • “Balance is essential—whether in ecosystems or in our own lives.” • “Every part has a purpose, just like in a team.” • “Adaptation is key to survival, in nature and in human communities.” 5. Celebrate Collaboration • Acknowledge group effort: “Notice how much more we discovered by working together—science thrives on collaboration, just like you did today.”
--	---	---

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

**C. Demonstrating
Knowledge and
Skills**

1. Finding Practical Application

Activity Flow: “Concept Web + Values Reflection”

Step 1: Concept Web (10 minutes)

Learners work in pairs or small groups. From their analyzed picture or video clip, learners will create a concept web that answers the central question: **“How do the parts of a living organism work together as a system?”**

1. Making Generalization

Step 2: Generalization Statement (15 minutes)

Each group writes a generalization that captures the core idea of the lesson. You can guide them with sentence starters:

- “All living things are made up of parts that...”
- “When one part of a system fails...”
- “Life depends on the cooperation of...”

Example:

“All living organisms are systems where each part has a role. These parts must work together to keep the organism alive, just like people in a community.”

Instruction to teacher:

- Start with the organism name in the center (e.g., “Flowering Plant” or “Fish”)
- Branch out to key parts (e.g., roots, stem, leaves; gills, fins, heart)
- Add arrows and notes showing how each part supports the others
- Include a caption: “This organism survives because...”

Criteria	Excellent (5)	Proficient 4	Beginning 3
Accuracy of Content	Generalization is scientifically accurate, clearly reflects the core idea of plant and animal systems, and shows deep understanding.	Mostly accurate, reflects the main idea with minor gaps or oversimplifications	Partially accurate, shows limited understanding; some misconceptions present.
Clarity of Expression	Statement is clear, concise, and easy to understand; uses precise language.	Statement is understandable with minor wording issues.	Statement is somewhat unclear or vague; needs refinement.
Depth of Insight	Goes beyond facts to show connections (e.g., interdependence)	Shows some insight into connections between	Limited insight; focuses only on

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

	3. Evaluating Learning - Values Reflection – What Does This Teach Us About Life? Instructions: Reflect on how this lesson connects to your life, relationships, or community. Answer one or more of the prompts below. Reflection Prompts: • How does understanding the interconnected systems within living organisms influence your sense of responsibility toward environmental and human health? • In what ways does the complexity of biological systems inspire you to value diversity, balance, or resilience in your own life or community?		ce, cooperation, adaptation); demonstrates systems thinking.	parts and systems.	isolated facts.
		Rubrics for Checking Demonstration of Knowledge: A: 18-20 points- Strong prior knowledge (ready for deeper exploration B: 14-17 points-Moderate understanding; needs reinforcement C: 10-13 points- Emerging awareness; scaffolded instruction recommended D: 5-9 points- Limited prior knowledge; foundational review needed The values reflection activity: Bridges knowledge and meaning. Learners move beyond memorizing biological systems to seeing themselves within systems—families, classrooms, communities. It’s where science meets self-awareness. <i>A student who understands how plant roots support leaves might begin to see how quiet acts of care sustain a group.</i> Cultivates empathy and shared responsibility. By asking learners to reflect on			

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

- When humans intervene in biological systems (e.g., through medicine, agriculture, or technology), what values should guide those actions to ensure respect for life and sustainability?

Additional Activity (Optional)

Create a Quote or Slogan

Write a short quote or slogan that captures the heart of today's lesson.

Suggested rubric in assessing the quote or slogan:

Criteria	What to Look for	Score Range
Relevance to lesson	Captures the core of life forms as system of related parts	1-5
Clarity and impact	Uses concise powerful language that's easy to understand and memorable	1-5
Creativity	Shows originality in phrasing, metaphor or perspective	1-5
Values Connection	Refers to themes like interconnectedness, balance and shared responsibility	1-5

teamwork and balance, you're helping them recognize that **every role matters**—even the unseen ones. This fosters respect, humility, and a sense of belonging. *"I'm like the stem," a student might say. "I help connect ideas and people."*

Reinforces values through lived analogies.

Biological systems offer rich metaphors for human relationships. When learners reflect on these, they internalize values like **interconnectedness**, **cooperation**, and **resilience**. *Just as a plant wilts without water, a team falters without communication.*

Supports holistic learning. This reflection taps into emotional intelligence, critical thinking, and ethical reasoning—all essential for **21st-century learners**. It's not just about what they know, but how they live it.

Tip: In assessing the quote or slogan, the teacher may give bonus points for quotes that spark discussion or offer a fresh insight into the topic.

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

Visual Analysis (Individual or Pair Work – 10 minutes)

Instructions for learners

Look at the provided images or videos of a simple plant and a simple animal. Identify and describe how their parts work together as systems.

Organism	Part	Function	How it Supports the System
Plant			
Animal			

Reflection Exit Slip (5 minutes)

Learners write a short reflection:

“What did I learn about how life forms function as systems—and how does this apply to how I live, learn, or work with others?”

Visual Analysis (Individual or Pair Work

In the visual analysis activity, teacher shall provide learners with a photo or video of a simple plant and a simple animal (e.g., flowering plant and fish).

Task:

- Identify at least 3 parts of each organism
- Describe the function of each part
- Explain how the parts work together to keep the organism alive

The visual analysis activity transforms observation into understanding—and understanding into insight.

It activates systems thinking. Learners move beyond naming parts to seeing how those parts interact and depend on each other. This builds the foundation for understanding organisms as integrated systems, not isolated structures.

In the reflection exit slip,

The short reflection invites learners to cross the bridge from scientific understanding to personal insight.

It deepens conceptual understanding through reflection

Rather than just recalling facts, learners are asked to **make meaning** of what they’ve

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

Assessment Criteria

Criteria	Indicators of Understanding	Score Range
Scientific Accuracy	Correct identification and explanation of parts and functions	1-5
System Thinking	Shows how parts interact to maintain balance and perform function	1-5
Comparative Insight	Thoughtful comparison of plant and animal systems	1-5
Values Connection	Reflects on broader meaning (e.g, teamwork, adaptation, balance)	1-5
Communication Clarity	Uses clear, organized language in chart, discussion and reflection	1-5

learned. They begin to see that life forms aren't just diagrams—they're models of **cooperation, balance, and resilience**.

It connects science to human experience. This question encourages learners to apply biological systems thinking to **how they live and interact**—in teams, families, classrooms, and communities.

It nurtures emotional intelligence and values integration. By reflecting on how systems work together, learners begin to understand **empathy, interdependence, and stewardship**—core values that shape character and community.

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

V. ASSESSMENT

(Assessing Learnings)

Part I: Multiple Choice (Knowledge & Understanding – 10 items)

Directions: Choose the best answer.

1. Which part of a plant is primarily responsible for absorbing water?
 1. Leaf
 2. Stem
 3. Root
 4. Flower
2. What system in animals is most similar to the plant's xylem and phloem?
 1. Digestive system
 2. Circulatory system
 3. Respiratory system
 4. Nervous system
3. Stomata in plants are responsible for:
 1. Nutrient transport
 2. Water absorption
 3. Gas exchange
 4. Reproduction
4. Which of the following best describes a system in biology?
 1. A group of unrelated parts
 2. A single organ performing all functions
 3. A set of parts working together to maintain life
 4. A random collection of cells
5. Tropism in plants is a response to:
 1. Light and gravity
 2. Temperature and humidity
 3. Sound and vibration
 4. Pressure and motion

(Continue up to 10 items with similar structure)

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

Part II: Matching Type (Systems & Functions – 5 items)

Directions: Match the plant or animal part in Column A with its function in Column B.

Column A	Column B
1. Leaf	a. Absorbs water and minerals
2. Root	b. Responds to stimuli
3. Flower	c. Site of photosynthesis
4. Brain	d. Reproduction in plants
6. Lungs	e. Gas exchange in animals

Part III: Diagram Interpretation (Application – 2 items)

Directions: Study the diagram of a plant system. Answer the questions that follow.

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

Parts of a Plant

1. Identify three parts in the plant diagram and explain how they work together to support survival.
2. Compare the transport systems in the plant and animal diagrams. How are they similar and different?

Part IV: Constructed Response (Analysis & Values Integration – 2 items)

Directions: Answer the questions in complete sentences.

1. Explain how the failure of one part of a biological system (e.g., roots, lungs, heart) can affect the entire organism.
2. Reflect: What can we learn from biological systems about teamwork and shared responsibility in our daily lives?

Part V: Performance Task (Optional Extension)

Task: Create a concept map or visual poster showing how a plant or animal functions as a system. Include:

- At least 4 parts
- Their functions
- Arrows showing interactions

Republic of the Philippines
Department of Education
BUREAU OF LEARNING DELIVERY

- A short caption: *“This organism survives because...”*

Answer Key to the Summative Test:

Part I: Multiple Choice

1. c. Root
2. b. Circulatory system
3. c. Gas exchange
4. c. A set of parts working together to maintain life
5. a. Light and gravity

Part II: Matching Type

1. c
2. a
3. d
4. b
5. e

Part III: Diagram Interpretation

(May vary based on student responses and diagrams used by the teacher.)

→ These parts work together to provide energy, hydration, and structural support.

Part IV: Constructed Response

1. **System Failure Impact**

- If roots fail, the plant cannot absorb water, leading to wilting and death.

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

- If lungs fail, oxygen cannot reach cells, affecting all body systems.
 → One part's failure disrupts the entire system's balance.

1. Values Reflection

- Biological systems teach us that every part matters.
- Just like in a team, cooperation and shared responsibility are essential.
 → We thrive when we work together and support each other's roles.

Part V: Performance Task (Concept Map)

Suggested Scoring Rubric for the Concept Map (Teacher may adjust weight or scoring scale based on agreement made with learners.)

Criteria	Excellent (5 points)	Proficient (3-4 points)	Developing
Scientific Accuracy	All parts and functions are correctly labeled and biologically accurate	Most parts are accurate, minor errors presented	Several inaccuracies or missing key parts/functions
Systems Thinking	Clearly shows how parts interact to maintain balance and perform essential functions	Shows some connections between parts, basic understanding of system function	Limited or unclear connections, lacks system perspective
Organization and Clarity	Layout clear and easy to follow arrows and labels enhance understanding	Layout is mostly clear, some connections may be hard to follow	Disorganized or confusing lay out. Difficult to interpret
Use of Virtual elements	Uses arrows symbols and color coding to show relationships	Uses some visual elements to support understanding	Minimal or ineffective use of visual elements

Republic of the Philippines
Department of Education
 BUREAU OF LEARNING DELIVERY

	Values integration	Includes insights or metaphors linking biological systems to teamwork, balance or shared responsibility	Attempts to connect system function to broader values or life lessons	No clear connection to values or broader meaning
	Creativity & Effort	Demonstrates originality, thoughtful design, and attention to detail	Shows effort and basic creativity	Minimal effort or copied structure; lacks personal touch
VI. REFLECTION <i>(Feedback and Continuous Improvement)</i>		<i>This section presents the key highlights and challenges encountered by both teachers and learners during the teaching-learning process throughout the unit. It also includes the adjustments made by the teacher to improve instruction.</i>
