LESSON EXEMPLAR			
Learning Area	General Science	Grade Level	11
Semester	2 nd	Quarter	3

I. OBJECTIVES *(Identifying the Goals)*

Content Standard	<i>Learners learn that organ systems work together to carry out essential functions of an organism.</i>
Performance Standard	<i>By the end of the quarter, learners use examples to describe the relationships among living systems and their components and how the structure of a part relates to its function. They explain the role of cells in perpetuating life and how organ systems work together to maintain optimal health. They conduct investigations on the effects of climate change on local ecosystems</i>
Learning Competencies	Prior Knowledge and skills Learned in the Previous Grade Level: Explain how vaccines work by relating to the functions of the immune system and lymphatic system in protecting an organism against infectious diseases.
II. REFERENCES and MATERIALS <i>(Selecting Resources and Material)</i>	Centers for Disease Control and Prevention. “Explaining How Vaccines Work.” Vaccines & Immunizations. <i>(These shall be accomplished per topic)</i>	
III. CONTENT <i>(Sequencing Content)</i>	<i>This section outlines the lesson or topic that learners need to learn to independently attain the Content Standard and achieve the Performance Standard</i>
IV. OBJECTIVES <i>(Setting Clear Objectives and Analyzing the Tasks)</i>	<i>At the end of the lesson, learners shall be able to:</i> 1. identify the major components and functions of the immune and lymphatic systems. 2. illustrate through diagrams or flowcharts how the immune and lymphatic systems interact to defend the body. 3. explain how vaccines trigger an immune response and provide protection against infectious diseases. 4. Advocate the importance of vaccination as a health measure in protecting individuals and communities by creating informative and infographic campaign materials, or video blog that demonstrates how vaccination protects individuals and communities."
IV. PROCEDURES	ANNOTATION

(Selecting Strategies, Making Meaningful Content, Delivering Lesson and Assessing Learning) This section focuses on selecting learner-centered, evidence-based instructional approaches such as problem-based learning, collaborative tasks, interdisciplinary integration, and technology-enhanced instruction. These strategies are intended to foster active engagement, critical thinking, and adaptability across diverse learning pathways. The chosen approaches and methodologies will be reflected through varied and relevant activities and assessments that emphasize real-world relevance and application, thereby enhancing learner engagement and comprehension. (Each part shall have 2-3 varied activities)		<i>*Instruction to the teacher on how to facilitate the activities.</i> <i>*In the Annotation, explicitly explain how the IDF is applied in each part of the lesson</i>								
A. Activating Prior Knowledge	1. Activating Prior Knowledge Option 1. K-W-L Chart The learners will draw a KWL Chart in their notebooks. The chart will have four columns labeled as follows: <table><tr><td>Scenario</td><td>What I certainly Know</td><td>Somehow I know</td><td>What I want to know</td></tr><tr><td></td><td></td><td></td><td></td></tr></table> The teacher will present a scenario about the major components and functions of the immune and lymphatic systems, how the immune and lymphatic systems interact to defend the body, how vaccines trigger an immune response and provide protection against infectious diseases and the importance of vaccination as a health measure in protecting individuals and communities. In the Scenario column, the learners will write down the given situation. In the What I certainly Know column, the learners will list facts or ideas they are fully confident about, supported by prior learning or evidence. In the Somehow I know column, the learners will record ideas they believe to be true but still need clarification or confirmation. In the What I Want to Know column, the learners will write questions or points of curiosity about the topic	Scenario	What I certainly Know	Somehow I know	What I want to know					IDF RELEVANCE: For option 1: The KWL Chart helps learners share what they already know and what they still want to learn. For teachers, it shows where learners are starting from, including their strengths and possible misconceptions. Likewise, it ensures that pedagogical strategies and instructional tasks are purposefully in line with the learners' recorded responses in the chart's first two columns. The KWL Chart engages learners in <i>inquiry and reflection</i> by activating what they already know (<i>Know</i>), identifying uncertainties (<i>Want to Know</i>), and setting learning intentions. The KWL chart is subdivided into 4 columns. In the scenario column, a situation related to the topic will be given. In the <i>Absolutely Certain</i> column, the learners will write facts and concepts the student is fully confident about, supported by evidence or prior learning. In the <i>Somewhat Sure</i> column they will write ideas
Scenario	What I certainly Know	Somehow I know	What I want to know							

	Scenario	What I certainly Know	Somehow I know	What I want to know	that they believe to be true but may need clarification or confirmation. For the <i>What I want to know</i> column, they will list questions or scenarios about the given scenario.
	When someone gets cut				
	Ana had chickenpox in Grade 3. When her younger brother got it, she did not get sick again				
	After getting a vaccine, a student feels mild fever and arm soreness.				
	After the learners are able to finish filling in the table, the teacher will call volunteer learners to share their answers in class. The teacher may ask additional responses from learners with different answers. This is a quick way for the teacher to gather general responses from the learners which can be useful to gauge the baseline knowledge that the learners have, and may provide immediate feedback for misconceptions from what the learners have listed in the What I Know Column.				

Expected Answer with teachers explanation:

Scenario	What I Certainly Know	Somehow I Know	What I Want to Know	Teacher Explanation
When someone gets cut	The body reacts to a cut by forming a scab to stop bleeding and protect the wound.	White blood cells help fight germs that enter the body through the cut.	How does the immune system detect germs when there is a wound?	When the skin is broken, pathogens like bacteria can enter. The immune system sends white blood cells (phagocytes) to the site to destroy these invaders and prevent infection (Marieb & Hoehn, 2019).
Ana had chickenpox in Grade 3. When her younger brother got it, she did not get sick again.	People who already had chickenpox usually don't get it again.	The body "remembers" how to fight the virus.	How does the body remember a virus?	After infection, the immune system creates memory cells that recognize the same virus if it appears again. This prevents reinfection (National Institute of Allergy and Infectious Diseases [NIAID], 2021).

		<table><tr><th>Scenario</th><th>What I Certainly Know</th><th>Somehow I Know</th><th>What I Want to Know</th><th>Teacher Explanation</th></tr><tr><td>Vaccination protects people from diseases.</td><td>Vaccines help prevent people from getting sick.</td><td>Vaccines have small or inactive parts of germs to make the body ready to fight real ones.</td><td>How do vaccines trigger the immune system without causing illness?</td><td>Vaccines introduce a harmless form of the antigen that stimulates the immune response, producing antibodies and memory cells without causing the actual disease (Centers for Disease Control and Prevention [CDC], 2023).</td></tr></table>	Scenario	What I Certainly Know	Somehow I Know	What I Want to Know	Teacher Explanation	Vaccination protects people from diseases.	Vaccines help prevent people from getting sick.	Vaccines have small or inactive parts of germs to make the body ready to fight real ones.	How do vaccines trigger the immune system without causing illness?	Vaccines introduce a harmless form of the antigen that stimulates the immune response, producing antibodies and memory cells without causing the actual disease (Centers for Disease Control and Prevention [CDC], 2023).
Scenario	What I Certainly Know	Somehow I Know	What I Want to Know	Teacher Explanation								
Vaccination protects people from diseases.	Vaccines help prevent people from getting sick.	Vaccines have small or inactive parts of germs to make the body ready to fight real ones.	How do vaccines trigger the immune system without causing illness?	Vaccines introduce a harmless form of the antigen that stimulates the immune response, producing antibodies and memory cells without causing the actual disease (Centers for Disease Control and Prevention [CDC], 2023).								
	Option 2: Defense Line Sorting Challenge Procedure: 1. The teacher provides learners with a set of scenario cards (e.g., <i>skin prevents entry of bacteria, fever increases body temperature, white blood cells engulf pathogens, lymph nodes filter lymph</i>). 2. In groups, ask them to sort the scenarios into First Line of Defense, Second Line of Defense , and Third Line of Defense. 3. Groups create a mini-flowchart showing how these defenses are triggered one after the other when a pathogen enters the body. Guide questions: 1. What body parts or organs act as the first line of defense against harmful microorganisms? 2. Which examples from the scenario cards belong to the first, second, and third lines of defense? 3. How do these defense lines work together to protect the body when pathogens enter?	IDF RELEVANCE: For option 2: The "Defense Line Sorting Challenge" exercise is extremely pertinent to the Inquiry-Discovery-Framework (IDF). Learners are encouraged to investigate the main elements of the lymphatic and immune systems during the Inquiry phase. In the Discovery phase, learners sort and categorize these elements into "first line," "second line," and "third line" defensive categories. They use faded scaffolds—support is initially given but then gradually removed to encourage independent reasoning—to successfully find patterns in the body's response to infections and the connections between immune responses and lymphatic transport through guided prompts.										

	Expected Output: The learners will be able to sort scenarios correctly, and present mini flow chart of the sequence of responses in the line of defense	The application of group sorting and discussion highlights evidence-based reasoning, critical thinking, and collaborative learning. Students use guided inquiry to uncover conceptual linkages. Option 2 Expected Answer: Correct Sorting of Scenarios 1. First Line of Defense: Skin prevents entry of bacteria Tears wash away dust/microbes Mucous membranes trap particles Stomach acid kills pathogens 2. Second Line of Defense: Fever increases body temperature Inflammation around wound White blood cells (phagocytes) engulf pathogens Natural killer cells attack infected cells 3. Third Line of Defense: Lymph nodes filter lymph and trap pathogens T-cells recognize infected cells B-cells produce antibodies Memory cells created for long-term immunity Note to the Teacher: The teacher may refer to the figure and the site: How Do Vaccines Work?
--	---	--

		 Source: Sarah Williams, “How Do Vaccines Work?,” gladstone.org, April 28, 2022, https://gladstone.org/news/how-do-vaccines-work.
A. Activating Prior Knowledge	2. Establishing the Purpose of the Lesson Building upon the review, the teacher will inform learners that lessons will focus on major components and functions of the immune and lymphatic systems, how the immune and lymphatic systems interact to defend the body, how vaccines trigger an immune response and provide protection against infectious diseases and the importance of vaccination as a health measure in protecting individuals and communities. Option 1. Option 1: STEAM Vocabulary Introduce the STEAM vocabulary. Ask the learners to write at least 3 words or terms related to the lesson/topic and define/describe or give examples related to the term. Materials Needed: • meta cards or small pieces of paper • Markers or pens	From the review, the teacher will ask probing questions about major components and functions of the immune and lymphatic systems, how the immune and lymphatic systems interact to defend the body, how vaccines trigger an immune response and provide protection against infectious diseases and the importance of vaccination as a health measure in protecting individuals and communities. Expected Answer: 1. Term: Immune system Definition: The immune system includes white blood cells, antibodies, and organs like the thymus and bone marrow that detect and destroy harmful microorganisms

Instruction: From the given purpose and goal of the lesson, give at least 3 terms and define/describe or give examples related to the term. Write your answers in a meta-card. Post them in the appropriate column.

Terms	Meaning/Description/Example
immune system	The immune system includes white blood cells, antibodies, and organs like the thymus and bone marrow that detect and destroy harmful microorganisms.

For discussion purposes:

Once the table is completed, review all the vocabulary words together. Encourage learners to share their ideas and discuss the meanings and significance of each word. Clarify any misunderstandings and provide additional explanations or examples as needed

Option: Using Classpoint for STEAM Vocabulary

Preparatory Phase:

The teacher prepares **two PowerPoint slides** for the activity.

Slide 1:

Insert a **Word Cloud** activity. Prompt: *“Type at least three (3) words or terms related to the lesson/topic.”*

Slide 2:

Insert a **Short Answer** activity. Prompt: *“Choose one of the words from the word cloud and write its meaning, description, or give an example.”*

Example: When bacteria enter a wound, white blood cells travel through lymph vessels to attack and destroy the invading microbes.

Source: Cleveland Clinic, “Immune System: Parts & Common Problems,” Cleveland Clinic (Cleveland Clinic, October 20, 2023), <https://my.clevelandclinic.org/health/body/21196-immune-system>.

2. Term: Lymphatic system

Definition: The lymphatic system consists of lymph nodes, lymph vessels, and lymph fluid that help transport immune cells and remove waste and toxins.

Example:

When a virus enters the body, lymph nodes swell because they are actively filtering pathogens and producing immune cells to combat the infection.

Source: Britannica, “Lymphatic System | Structure, Function, & Facts,” in *Encyclopædia Britannica*, February 7, 2019, <https://www.britannica.com/science/lymphatic-system>.

3. Term: Antibodies

Definition: Antibodies are special proteins made by the immune system to recognize and fight harmful substances like bacteria and viruses.

Example: When a person is vaccinated against measles, their body produces antibodies that can recognize and fight the

	<i>During the instruction:</i> 1. The teacher introduces the activity and explains that learners will use ClassPoint to share vocabulary terms related to the topic. 2. The teacher instructs learners to log in to ClassPoint using the code or link provided. 3. The teacher displays slide 1 and allows learners to type their responses. The answers automatically appear on the slide as part of the word cloud. 4. The teacher displays slide 2 and gives learners time to submit their answers. The teacher may then display selected responses for discussion or feedback. 5. The teacher discusses some of the submitted terms and examples to clarify meanings and reinforce understanding.	measles virus if the person is exposed to it in the future. Source: Cleveland Clinic, “Antibodies,” Cleveland Clinic, May 6, 2022, https://my.clevelandclinic.org/health/body/22971-antibodies. 4. Pathogens Term: Pathogens Definition: Pathogens are microorganisms like bacteria, viruses, fungi, and parasites that can cause disease when they enter the body. Example: The influenza virus is a pathogen that causes the flu. When it infects a person, it can lead to fever, cough, and body aches. Source: Alex Bell, “Pathogens: Definition, Types, Diseases, Prevention, and More,” www.medicalnewstoday.com, August 21, 2020, https://www.medicalnewstoday.com/articles/pathogens-definition#diseases. IDF RELEVANCE: For Option 1. The STEAM Vocabulary activity applies this IDF framework by encouraging learners to think deeply and connect their prior knowledge to the new lesson. It is relevant part that comes in when learners describe or give examples of the terms based on their own
--	---	---

		understanding or real-life experiences. It is also responsive when the teacher checks learners' answers and gives feedback or clarification based on what they wrote, adjusting instruction to meet their needs. As students define, explain, or provide instances of scientific words pertaining to the immune and lymphatic systems, it employs inquiry-based learning, encouraging concept formation through supervised investigation. Notes to the teacher: When the modality shifts to blended, make use of class point to solicit the terms, Meaning/Description/Example. This option can be made for synchronous modality, where the teacher can meet the class via Google meet, Zoom or Microsoft Teams. Follow the same preparation as stated in the option. For the use of class point, the teacher may watch the video to install and use the classpoint: https://www.youtube.com/watch?v=Tp_j72LXJj8 https://www.youtube.com/watch?v=JaTXmfhup_g https://www.youtube.com/watch?v=ocJqh_oUHQF4
--	--	--

	Option 2: Anticipation Guide Introduce the anticipation guide to activate learners' prior knowledge and build curiosity about major components and functions of the immune and lymphatic systems, how the immune and lymphatic systems interact to defend the body, how vaccines trigger an immune response and provide protection against infectious diseases and the importance of vaccination as a health measure in protecting individuals and communities. . The learners should agree or disagree with the statements <i>before</i> and <i>after</i> instruction. The teacher then explains: <i>"Today's lesson will help us understand how the immune and lymphatic systems protect us, how vaccines strengthen our defense, and why vaccination is important for both individuals and communities."</i>	For Option 2. The Anticipation Guide stimulates curiosity and activates existing knowledge about the immune and lymphatic systems, their relationships, and the function of vaccines, which is in line with the Inquiry-Discovery-Framework (IDF). Learners are guided by the assertions at first, and then they independently examine and assess their answers using Faded Scaffolds. Leverage Points assist learners in identifying important ideas with practical applications, like vaccination, while the activity promotes Structured Feedback as learners debate and consider their arguments with peers. All things considered, it leads learners from inquiry to discovery and contemplation, encouraging greater comprehension and significant application. By encouraging students to anticipate, challenge, and assess their preexisting assumptions about the immune and lymphatic systems both before and after training, the Anticipation Guide exemplifies inquiry-based learning.
B. Instituting New Knowledge	1. Presenting Examples Option 1. Label and Explain – Major Components of the Immune and Lymphatic Systems Instructions: 1. Study the diagram of the immune and lymphatic systems .	In the Label and Explain or Diagram Walkthrough, the Faded Scaffolds approach is still used. Diagrams and early clues are progressively labeled to encourage autonomous mastery without overwhelming learners. In order to ensure that learners can accurately identify structures such as lymph nodes, spleens, thymus, and

2. Label the major components (e.g., lymph nodes, thymus, spleen, tonsils, bone marrow, lymphatic vessels, white blood cells).

3. For each component, write a short explanation of its function.

Guide Question

1. Which component is most critical for producing the first line of defense against pathogens? Why?

Optional: The teacher may use the LAS or ask the learners to access an interactive worksheet in this link for the labeling part of the LAS:

<https://ecampusontario.pressbooks.pub/medicalterminology/chapter/lymphatic-system/>

immune cells, as well as their functions, formative evaluation is carried out through the completion of diagrams and peer conversations that dispel preconceptions.

Option 1 Expected Answer:

source: Lymphoma Canada, "Lymphatic System," Lymphoma Canada, n.d., <https://www.lymphoma.ca/lymphoma/overview/lymphatic-system/>.

Source: Susan Yox, “Understanding White Blood Cells and Differentials,”
www.patientpower.info, February 27, 2023,
<https://www.patientpower.info/navigating-cancer/understanding-white-blood-cells-and-differentials>.

Component	Function
Lymph nodes	Filter harmful substances and contain immune cells that fight infection
Thymus	Site for T cell maturation
Spleen	Filters blood, removes old red blood cells, stores white blood cells
Tonsils	Trap pathogens entering through mouth and nose
Bone marrow	Produces all blood cells including immune cells

		Lymphatic vessels White blood cells Transport lymph fluid and immune cells throughout the body Identify and destroy pathogens IDF relevance and use of Structured Pedagogy for Key Stage 4 The video clips offer a scaffolded learning experience for teachers, allowing learners to connect pictures to existing knowledge, generate questions, and observe and process important topics with guided guidance (Faded Scaffolds). In order to ensure that learning is both relevant to real-life health applications, responsive to learners' needs by building on prior knowledge, and reflective through post-viewing discussion, the assessment dimension is supported by the ability to check learners' comprehension through reflection, discussion, or follow-up questions. The Faded Scaffolds approach guarantees a balance between clarity and discovery. The activity places a strong emphasis on guided inquiry and conceptual mastery, while peer conversations and formative assessments further promote introspection and the clearing of misconceptions.
--	--	--

B. Instituting New Knowledge

Option 2: Diagram Walkthrough

This activity will illustrate how the immune and lymphatic systems interact in protecting the body.

Procedure:

1. Teacher shows an incomplete flowchart or diagram of the immune response or graphic organizer

Illustration:				
Process:				
Description:				

2. Learners work in groups to complete the diagram by adding steps and illustrations provided. (Pathogen → Lymphatic Transport → Lymph Node Activation → Antibody Production → Memory Cells).

Word and Description Bank (optional)

Activation	Antibody Production
Detection	Future Protection

IDF relevance and use of Structured Pedagogy for Key Stage 4

For option 2. Through active, learner-focused, and outcome-based teaching, Diagram Walkthrough exercise for Key Stage 4 integrates the Instructional Design Framework (IDF) with Structured Pedagogy. Through guided filling in of a flowchart, it supports learners to explore the interconnection between the lymphatic and immune systems and build conceptual understanding and critical thinking. The activity also promote engagement of diverse learners through the strategies like scaffolding, inquiry-based learning, collaborative learning, visualization that is fostered in the activity

Note: The illustrations for Diagram Walkthrough are AI generated. The teacher may use other illustrations

	Invasion Memory Lymphatic Transport Pathogen Entry 3. Each group presents their finished diagram and explains it briefly. Guide questions: 1. What is the first step when a pathogen enters the body? 2. How does the lymphatic system help in transporting and detecting the pathogen? 3. What happens in the lymph nodes to fight off the infection? 4. How do antibodies and memory cells help protect the body in the future? Output: Completed diagram or flowchart showing interaction of immune and lymphatic systems	
	1. Discussing New Concept The teachers will present videos/selected clips from the video about the immune and lymphatic system Immune System Function and Lymphatic system Function https://www.youtube.com/watch?v=5YPM74FZDQQ Immune System: What Is the Immune System for Kids Learn all about how the body fights off bad germs. from https://www.youtube.com/watch?v=cVIEqR1t9bQ Line of Defenses: 0:00- 2:36 clip of the Three Lines of Defense against Pathogen https://www.youtube.com/watch?v=davUbXFEEl0	<i>Note to the Teacher: In Discussing New Concept, the teacher must be able to provide guide discussion and show the video clip suggested or may opt to find other videos to supplement the guide discussion.</i>

	Lymphatic System: 2.55 -4:04 clip of Lymphatic System Explained In Simple Words from https://www.youtube.com/watch?v=eWUAB194qhU Option 1. Case Study Matching This activity will help learners identify how the immune and lymphatic systems defend the body in real situations. Procedure: 1. The teacher provides short case scenarios (e.g., “Maria got a cut on her finger and bacteria entered the wound,” or “Jose received a flu vaccine last month”). 2. Learners, in pairs, match each case with the correct immune/lymphatic response (e.g., phagocytosis, antibody production, memory cell activation). 3. Groups present their answers and justify their reasoning. Guide question: 1. What happened in the scenario? 2. Which component of the immune or lymphatic system is responding to this situation? 3. How does the body’s immune or lymphatic system defend against this threat? 4. Why is this response important for protecting the body now and in the future? Output: Matched case-response chart.	Option 1 Answer Key: 1 – A 2 – B 3 – C 4 – D 5 – E 6 – F IDF relevance and use of Structured Pedagogy for Key Stage 4 The Case Study Matching exercise operationalizes the IDF by having learners apply their understanding of the immune and lymphatic systems to actual cases. One of the main goals of the IDF is to effectively bridge the gap between foundational knowledge and practical reasoning by having learners progress from guided comprehension to independent analysis. The following are some ways that matching and explaining activities relate to the Instructional Development Framework (IDF): (1) learners explain their matches; (2) learners explain how and why they made those connections; (3) the activity becomes more meaningful when the items being matched (like real-life applications) are
--	--	--

		connected to the learners' everyday experiences or current lessons; and (4) the teacher can adjust instruction based on the learners' performance, offer clarification, or provide targeted support, making learning more individualized.
	Option 2: Immune Response Relay: Defend the Body! Divide the class into teams representing both invading pathogens and immune defenders. Instructions: 1. There are five stations, each representing a stage of the immune and lymphatic system's defense for a relay game. Teams may start at any station to avoid crowding. 2. At each station, the team must perform the action, explain or demonstrate the immune role, and correctly answer the station questions before moving on. Station 1: Invasion (Pathogen Entry) Station 2: Detection (Lymphatic Transport) Station 3: Activation (Lymph Node Response) Station 4: Response (Antibody Production) Station 5: Memory (Future Protection) 3. First team to complete the relay correctly wins. Guide Questions: 1. What role did each immune system component play in neutralizing the pathogen during the relay? 2. How did the lymphatic vessels support the immune system in transporting the pathogen to the lymph node? 3. Why is the coordination between T-cells and B-cells important for an effective immune response?	Option 2. In option 2, a game-based activity extends and gives it significance. By fusing systems thinking, reflective reasoning, and active involvement, the Immune Response Relay operationalizes the IDF. Learners investigate the strategic importance of linkages between the lymphatic and immune systems using Leverage Points. By means of Counter-Arguments, they critically assess other approaches. They examine and improve their own learning processes using Advanced Metacognition. The fundamental goals of the IDF are fulfilled by this comprehensive method, which guarantees that learners progress from rote memory to advanced understanding and application. The <i>Case Study Matching</i> activity applies Structured Pedagogy, Inquiry-Based Learning, Contextualization, Collaborative Learning, and Reflective Practice by engaging learners in analyzing real-life health scenarios. The activity integrates Structured Pedagogy, Inquiry-Based Learning, Collaborative Learning, Experiential Learning, and Reflective Practice by engaging learners in a game-based simulation that models immune and lymphatic interactions

	4. How does this relay simulation illustrate the interaction between the immune and lymphatic systems in defending the body?	Note: The activity is developed with a Learning Activity Sheet.
	3. Developing Mastery Option 1. Immune Defense Cause-and-Effect Chain Instruction: 1. Using the vaccine scenario, show the sequence of events from pathogen entry to disease prevention. A booster shot is meant to increase levels of immune responses after these have naturally waned. A booster tricks the immune system into thinking that it is again seeing a pathogen, so antibody producing cells, and other immune cells, are recalled into gear. The quantity and quality of antibodies that are produced can increase. Through a process called antibody affinity maturation, our immune system learns to do a better job at recognizing a pathogen and making antibodies that bind more tightly to their target. For the SARS-CoV-2 virus, for example, affinity matured antibodies can be more effective at recognizing variants with multiple mutations. Source: Nealon, Dennis. "Understanding the Science Behind a Vaccine Booster." <i>Harvard Gazette</i>, November 23, 2021. Accessed October 18, 2025. https://news.harvard.edu/gazette/story/2021/11/understanding-the-science-behind-a-vaccine-booster/ 2. Use the following cause-and-effect diagram showing the sequence of events from pathogen entry to disease prevention.	For option 1. reflective reasoning, and visual modeling, the Immune Defense Cause-and-Effect Chain exercise operationalizes the IDF. Learners use Leverage Points to pinpoint important phases in the immunological response. They critically assess opposing interpretations through Counter-Arguments. IDF guarantees that learners get a thorough, interconnected awareness of how the immune and lymphatic systems protect the body and how vaccinations strengthen this defense. The activity employs Inquiry-Based Learning, Visual and Reflective Learning, and Systems Thinking by guiding learners to analyze and illustrate the sequence of immune responses, identify cause-and-effect relationships between system components

	<table border="1"> <thead> <tr> <th>Cause</th><th></th><th>Effect</th></tr> </thead> <tbody> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> <tr><td></td><td>➡</td><td></td></tr> </tbody> </table> 3. Use colors to distinguish between immune system components, lymphatic system components, and vaccine effects.	Cause		Effect		➡			➡			➡			➡			➡			➡			➡			➡

	Option 2: ImmunoFeud Materials Needed: Question cards (or slides) Buzzer or bell Scoreboard / whiteboard Procedures: Divide the class into teams.	For option 2. By converting understanding of the immune and lymphatic systems into an engaging, competitive structure that strengthens memory, application, and reasoning, ImmunoFeud operationalizes the IDF. Through Counter-Arguments, Leverage Points, and Advanced Metacognition, learners participate in conversations, identify crucial system components, and reflect on their own learning. The game employs Game-Based Learning, Collaborative Learning, Inquiry-																											

	The teacher will act as a host. The host will draw a question card from a shuffled deck. A representative of the group will play one at a time. The representative of the group to be the first to hit the buzzer shall be given the chance to answer. He/She must: Name top 5 answers If correct, the team earns 1 point for every correct answer If a team answers incorrectly, other teams may "steal" the question for a bonus point. The group with the highest points earned wins the game. .	Based Learning, and Reflective Practice by engaging learners in an interactive quiz competition that reinforces understanding of immune and lymphatic functions Sets of Questions with Top 5 Answer and Explanation: 1: Name the main components of the immune system. Top 5 Answers: 1. White blood cells 2. Bone marrow 3. Thymus 4. Spleen 5. Lymph nodes Explanation: The immune system is made up of specialized organs and cells that defend the body from pathogens. White blood cells are the main defenders, and they are produced in the bone marrow. Lymph nodes and the spleen act as filters and sites for immune cell activation. 2. What are the main functions of the immune and lymphatic systems? Top 5 Answers: 1. Defend the body against pathogens and infections 2. Filter and remove harmful substances from the body 3. Produce white blood cells and antibodies
--	--	--

		4. Maintain body fluid balance through lymph circulation 5. Create immune memory for long-term protection Explanation: The immune system fights off harmful microbes and builds memory to prevent future infections, while the lymphatic system filters lymph, removes waste, and circulates immune cells throughout the body. Together, they form a strong line of defense that keeps the body healthy. 3. What happens in the body after receiving a vaccine? Top 5 Answers: 1. The immune system detects harmless antigens. 2. White blood cells are activated. 3. Antibodies are produced. 4. Memory cells are created. 5. Long-term protection is established. Explanation: Vaccines stimulate an immune response without causing illness. This trains the body to recognize and respond quickly to future infections. 4. Name the body's first line of defense against pathogens. Top 5 Answers: 1. Skin 2. Mucous membranes 3. Tears and saliva 4. Stomach acid 5. Nasal hairs / cilia Explanation: These are <i>non-specific defenses</i> that
--	--	--

		physically or chemically block pathogens before they enter the bloodstream. 5. List the ways to strengthen the immune system. Top 5 Answers: 1. Eat a balanced diet 2. Get enough sleep 3. Exercise regularly 4. Manage stress 5. Stay vaccinated Explanation: Healthy habits support immune function by maintaining energy, hormone balance, and cell repair, while vaccines provide targeted protection.
C. Demonstrating Knowledge and Skills	1. Finding Practical Application Option 1. Dress the Body for Defense – Vaccine in Action. Give each student/group a paper doll or body outline. This represents a human body that needs to defend against infections. The group will also be given colored paper or sticky notes . Instructions: 1. Using the sticky notes with the following labels, attach it to the paper doll as if you are dressing the doll. (See attached LAS) Ensure proper placement of the labels. - vaccine - lymph nodes - white blood cells - antibodies near the blood vessels. - memory cells	IDF relevance and use of Structured Pedagogy for Key Stage 4 The IDF is operationalized through the Finding Practical Application activities, which convert abstract ideas about the immune and lymphatic systems into concrete, socially useful tasks. Learners use Leverage Points to pinpoint important defense and vaccination mechanisms; Counter-Arguments to critically discuss and defend their representations; and Advanced Metacognition to consider their learning strategies and the significance of immunity in general. This integrated approach fulfills the fundamental goals of the IDF by guaranteeing that learners get both material mastery and the ability to apply it critically in real-world situations. The activity employ Inquiry-Based

	2. Paste the doll in a one-whole bond paper. And label de 3. Below the doll, illustrate or draw the interactions among these immune components showing how the vaccine activates the body's defenses. Follow-up questions for Illustration and Discussion: 1. What happens inside the body when a vaccine is introduced? 2. How do white blood cells, lymph nodes, and antibodies work together to fight infection? 3. Why are memory cells important in protecting the body from future infections? 4. How does vaccination prepare the body to respond faster and stronger against real pathogens? The learners present their paper dolls to the class, explaining the flow of immune defense and the role of vaccines.	Learning, Experiential and Visual Learning, Collaborative Learning, and Contextualization Expected Answers: · <i>Vaccine</i> – at the injection site (e.g., arm) · <i>Lymph nodes</i> – near armpits, neck, or groin area · <i>White blood cells</i> – circulating around the body · <i>Antibodies</i> – near the blood vessels · <i>Memory cells</i> – within the bloodstream or lymphatic areas
	Option 2: News Reflection This activity will be done in groups. The teacher will provide copies of news related with major components and functions of the immune and lymphatic systems, how the immune and lymphatic systems interact to defend the body, how vaccines trigger an immune response and provide protection against infectious diseases and the importance of vaccination as a health measure in protecting individuals and communities. Before the learners gather by group, the teacher will also share the discussion questions as guide for the learners as they read the news. Here is a sample news article that can be used by the teacher. "DOH reports significant rise in measles cases among unvaccinated children." <i>GMA Integrated News</i>,	IDF relevance and use of Structured Pedagogy for Key Stage 4 The News Reflection provides connection of the concepts to real-life experiences. Because it is conducted in groups, it fostered critical thinking and information literacy skills as they evaluate the accuracy, relevance, and implications of scientific information presented in media. It employs collaborative learning as learners share insights, question ideas, and synthesize information to form informed opinions. It also nurtures scientific awareness, social responsibility, and appreciation for evidence-based health

	March 14, 2025. The news is about the 35% increase in measles cases in the Philippines from January to March 2025, which was mostly among unvaccinated children. This prompted the Department of Health (DOH) to intensify vaccination and catch-up immunization programs nationwide. Learners are asked to reflect silently for 2 minutes. Discussion Questions: 1. Why is it important to know how our body fights infections? 2. <i>How does knowing about vaccines and immunity help my family and community?</i>	practices in real-life contexts. The activity utilizes Contextualization, Collaborative Learning, Reflective Practice, and Critical Thinking by engaging learners in analyzing real-world news on vaccination												
C. Demonstrating Knowledge and Skills	2. Making Generalization Option 1. KWL Continuation The learners will continue filling the last part of their KWL Chart- What I Learned column. In this part, they will summarize key takeaways from the lesson using the table: <table><tr><td>Scenario</td><td>What I certainly Know</td><td>What I want to know</td><td>What learned</td></tr><tr><td>When someone gets cut</td><td></td><td></td><td></td></tr><tr><td>Ana had chickenpox in Grade 3. When her younger brother got it, she did not get sick again</td><td></td><td></td><td></td></tr></table> Option 2: One Sentence, Big Idea”	Scenario	What I certainly Know	What I want to know	What learned	When someone gets cut				Ana had chickenpox in Grade 3. When her younger brother got it, she did not get sick again				IDF relevance and use of Structured Pedagogy for Key Stage 4 Through the consolidation, assessment, and communication of knowledge, the Making Generalization exercises operationalize the IDF. Learners identify important components of immunological protection through Leverage Points, participate in peer evaluation discussions through Counter-Arguments, and evaluate and improve their learning practices through Advanced Metacognition. The overall objectives of the IDF are met by this combination, which guarantees that learners not only grasp the material but can also generalize and apply it in significant ways. The activity is aligned with Reflective
Scenario	What I certainly Know	What I want to know	What learned											
When someone gets cut														
Ana had chickenpox in Grade 3. When her younger brother got it, she did not get sick again														

	The learners will generalize their learning about the immune and lymphatic systems, vaccines, and the importance of vaccination in one clear statement. Instructions: 1. Think about what you learned in this lesson: - Major components and functions of the immune and lymphatic systems - How these systems interact to defend the body - How vaccines trigger an immune response - Why vaccination is important for individuals and communities 2. Write one sentence that summarizes the “big idea” of the lesson and post it on the board. Example starter: “The immune and lymphatic systems work together to ___, and vaccines help ___ to protect ___.”	Learning, Metacognitive Development, and Inquiry-Based Learning. Learners fill out the "What I Learned" area of their charts in KWL Continuation, making connections between new and existing information. As learners determine the crucial actions or ideas that have the biggest effects on immune system performance, vaccine effectiveness, or illness prevention, this exercise encourages Leverage Points. The One Sentence, Big Idea exercise encourages Advanced Metacognition by requiring learners to summarize the entire lecture in a single, coherent phrase. By considering what they have learned, prioritizing pertinent information, and successfully communicating it, learners improve their ability to self-monitor and evaluate their learning.
	3. Evaluating Learning Option 1. Quick Quiz Learners indicate whether each statement is True (T) or False (F) 1. By generating lymphocytes, the lymphatic system aids in the fight against infections. 2. Vaccines lead the body to develop a serious illness.	IDF relevance and use of Structured Pedagogy for Key Stage 4 Through the integration of evaluation, reflection, and metacognitive reasoning, the Evaluating Learning activities operationalize the IDF. Learners identify important immune defense and vaccination mechanisms through Leverage Points; they engage in evaluative discussion to support and improve their understanding through

	3. The immune system produces antibodies to combat infections. 4. The body may react to illnesses more quickly thanks to memory cells. 5. The community is not protected by vaccinations; only the individual is. 6. Spleen is a vital organ of the lymphatic system, responsible for purifying blood and protecting against infection. 7. White blood cells are components of the immune system and protect the body against infectious agents. 8. Vaccines induce long-term protection by producing memory cells. 9. The lymphatic and immune systems function independently and never have a relationship. 10. Vaccination acts to shield the entire community through its ability to decrease the possibility of the spread of disease. Option 2: Option 1: 3-2-1 Exit Ticket Before leaving the lesson, learners will reflect on their learning about the immune and lymphatic systems and their role in defending the body. They will complete the 3-2-1 Exit Ticket: 3 – Things you learned → Key takeaways about how the immune and lymphatic systems work together to fight infections. 2 – Things you found interesting → Concepts, processes, or real-world applications (like vaccines or immune responses) that stood out.	Counter-Arguments; and they reflect on their learning process, new insights, and unanswered questions through Advanced Metacognition. The fundamental goals of the IDF are fulfilled by this integrated approach, which guarantees that learners integrate knowledge, critically evaluate their comprehension, and relate what they learn in the classroom to larger health applications. It utilized Assessment for Learning, Reflective and Metacognitive Learning, by providing opportunities for learners to check understanding, evaluate misconceptions, reflect on insights gained By giving learners organized chances to evaluate and consider their understanding, the Evaluating Learning activities—Quick Quiz, 3-2-1 Exit Ticket, and Anticipation Guide—align with the IDF. The exit ticket and anticipation guide foster advanced metacognition by helping the learners reflect on what they have learned. Learners can also summarize key concepts before and after the instruction.
--	--	--

	1 – Question you still have → Any unclear point or topic you would like to explore further about immunity, diseases, or body defense. Option 3: Anticipation Guide Use the same anticipation guide. Ask the learners to answer the “after” part. Verify with the student what changed in their responses.	
	4. Additional Activity/ies (Take home) Option 1. Be a Vaccine Advocate: Create Your Own Infographic Instruction: Using Canva, PowerPoint, or Manila paper/cartolina, design an infographic that answers the following: 1. What are vaccines? (simple definition) 2. How do vaccines work? (steps: antigen → immune response → antibodies → memory cells) 3. Why are vaccines important? (prevention, herd immunity, community health) 4. Call to action: Encourage classmates, family, and community to support vaccination. Your infographic must include: 1. Title and slogan (e.g., “<i>Vaccines Save Lives!</i>”). 2. Simple illustrations/graphics (shields, germs, people, syringes). 3. At least two reliable sources cited at the bottom in APA format. (See attached rubric for grading)	IDF Relevance: Creating the vlog and poster requires learners to explain their understanding clearly, helping them process and internalize what they’ve learned. The task connects science to real-life products and daily activities, making learning meaningful and applicable. This becomes reflective and relevant. The Additional Take-Home Activities link classroom instruction to practical advocacy and communication, operationalizing the IDF. Learners emphasize important immunity and vaccine processes through Leverage Points; they critically assess peer work and defend their own positions through Counter-Arguments; and they consider audience impact, content sequencing, and content selection through Advanced Metacognition. The overall objectives of the IDF are met by this

	Option 2: Vaccine Advocacy Vlog Challenge Learners will create a short vlog advocating for vaccination, explaining how the immune and lymphatic systems work, how vaccines protect the body, and why vaccination is important for individuals and communities. Instruction: In pairs, make a 1–3 minute vlog that includes: 1. A brief explanation of the immune and lymphatic systems 2. How vaccines trigger an immune response 3. Why vaccination is important for protecting yourself and your community 4. A call-to-action encouraging people to get vaccinated Option 3 Creative Campaign: Advocating Vaccination / How Vaccines Work Learners can choose one of the following creative tasks: A. Write a Song 1. Compose a song that explains how vaccines work or encourages people to get vaccinated. 2. Include key ideas: immunity, pathogens, antibodies, memory cells. 3. Use simple, catchy lyrics and optionally a melody. 4. Perform live or record for presentation. B. Write a Poem 1. Create a poem that educates about vaccines or inspires others to get vaccinated. 2. Use poetic devices like rhyme	integrated approach, which guarantees that learners build strategic, reflective, and communication abilities as well as consolidate knowledge and apply it meaningfully. The Additional Activity/ies (Take-Home) utilize Performance-Based Assessment, Creative and Multimodal Learning, Contextualization, and Reflective Practice Note: Additional Activities may also be given as performance task
--	--	---

	3. Highlight key concepts like protection, immunity, and disease prevention. C. Create a Comic Strip 1. Illustrate a comic strip that shows how vaccines protect the body, or why people should get vaccinated. 2. Include characters, dialogue, and captions for explanation. 3. 4–6 panels are recommended.													
V. ASSESSMENT Instructions: Answer all items completely. A. Match each component with its correct function.<table><thead><tr><th>Component</th><th>Function</th></tr></thead><tbody><tr><td>1. Lymph nodes</td><td>A. Produces antibodies to fight infections</td></tr><tr><td>2. Bone marrow</td><td>B. Filters lymph and traps pathogens</td></tr><tr><td>3. Thymus</td><td>C. Matures T-lymphocytes for immune response</td></tr><tr><td>4. Spleen</td><td>D. Produces red and white blood cells, including B-lymphocytes</td></tr><tr><td>5. Tonsils</td><td>E. Traps pathogens entering through the mouth and nose</td></tr></tbody></table> B, Complete the immune response flowchart below and label the missing steps. Flowchart: Pathogen → _____ → Lymph Node Activation → _____ → Memory Cell Formation → Pathogen Elimination C. Short Answer: Explain how the components of the immune system (e.g., lymph nodes, thymus, bone marrow) work together to fight off a pathogen.		Component	Function	1. Lymph nodes	A. Produces antibodies to fight infections	2. Bone marrow	B. Filters lymph and traps pathogens	3. Thymus	C. Matures T-lymphocytes for immune response	4. Spleen	D. Produces red and white blood cells, including B-lymphocytes	5. Tonsils	E. Traps pathogens entering through the mouth and nose	IDF Relevance: The quiz emphasizes the connection of the content standard by focusing on practical examples and real-life phenomena. The <i>Assessment</i> section reflects Standards-Based and Competency-Based Assessment,
Component	Function													
1. Lymph nodes	A. Produces antibodies to fight infections													
2. Bone marrow	B. Filters lymph and traps pathogens													
3. Thymus	C. Matures T-lymphocytes for immune response													
4. Spleen	D. Produces red and white blood cells, including B-lymphocytes													
5. Tonsils	E. Traps pathogens entering through the mouth and nose													

Predict what could happen to the body's immune defense if the spleen or bone marrow stops functioning properly. Explain how vaccines trigger an immune response and provide protection against infectious diseases.	
VI. REFLECTION <i>(Feedback and Continuous Improvement)</i>	

Infographic Rubric

Criteria	4	3	2	1	Points
Content	The topic is covered thoroughly, with a variety of supporting data where appropriate. Main points are summarized concisely and masterfully. Required content is included and supplemented with additional, relevant material.	The topic is covered adequately, with some supporting data where appropriate. Main points are summarized adequately. Required content is included.	The topic is covered partially, with few supporting data where appropriate. Main points are listed, but not concisely. Some required content is missing.	The topic is covered superficially, and no supporting data is used. Main points are summarized poorly and are not concise. A significant amount of required content is missing.	
Organization/ Layout	Visual layout is uncluttered, well-organized, and arranged so that the infographic purpose is very clear.	Visual layout is mostly uncluttered, organized, and arranged so that the infographic purpose is discernable.	The visual layout is somewhat cluttered, and unorganized. The arrangement sometimes confuses the infographic purpose.	Visual layout is cluttered, and unorganized. The arrangement is confusing and the infographic purpose is unclear.	

Criteria	4	3	2	1	Points
	Colors and font sizes/variations facilitate organization, presentation, and readability of information.	Colors and font sizes/variations do not interfere with the organization, presentation, and readability of information.	Colors and font sizes/variations occasionally interfere with the organization, presentation, and readability of information.	Colors and font sizes/variations hinder organization, presentation, and readability of information.	
Quality of Graphic Resources	Graphics are clearly visible and of high quality. Tables, charts, and images enhance the content, convey relevant information and are taken from appropriate sources.	Most graphics are clear and quality is adequate. Tables, charts, and images support the content, are somewhat relevant and most are taken from appropriate sources.	Some graphics are unclear or of low quality. Tables, charts, and images contribute somewhat to the content, have limited relevance and/or are taken from questionable sources.	Graphics are unclear or poor quality. Tables, charts, and images do not contribute to the content, have no relevance, and/or are taken from inappropriate sources.	
Citation, Credits and Copyright	All sources cited in preferred style, with no formatting errors. Credits are listed properly for all graphics. All graphics obtained legally and licensed appropriately.	All sources cited in the preferred style, with few formatting errors. Credits for graphics missing some details. Some sources are not licensed appropriately.	Some sources not cited accurately or in the preferred style. Credits for graphics missing many details. Licensing of many sources is questionable.	Many sources are not cited accurately. No or few credits given for graphics. Most sources infringe on copyright.

Rubric for Song Writing

Criteria	4	3	2	1	Points
LYRICS	The song lyrics are outstanding. The words are memorable. The song lyrics are enthusiastically received by the audience	The song lyrics are good. The words are memorable. The song lyrics are enthusiastically received by the audience	The song's lyrics are somewhat coherent. The song lyrics are well received by the audience	The song's lyrics are not coherent. The words are not memorable. The audience does not really like the song lyrics.	
CREATIVITY	The composed song is totally original and the message is transmitted greatly.	The composed song is original and the message is transmitted well.	The composed song is not very original. The message is not very clear.	The song composed is not original. The message is not conveyed.	
TEMPO AND MELODY	The melody and rhythm were perfectly performed. learners could clap along to a steady beat.	Tempo and rhythm are consistent. The melody is mostly smooth and clear.	Tempo and rhythm are sometimes unclear or slow down or speed up. The melody is apparent in some places but unclear in others.	The song has an unnatural mix of tempo. The melody of the song is unclear.	
ORGANIZATION	The song is clearly organized, with correct grammar and spelling.	The song is not totally organized, it has a few grammar and spelling mistakes.	The song is not very organized and it has some grammar and spelling mistakes.	The song is unorganized, difficult to follow and full of grammar and spelling mistakes.	

Criteria	4	3	2	1	Points
RELEVANCE TO THE TOPIC	The topic is clearly explained and relevant.	The topic of the song is explained but there are no specific details as evidence that support it.	The topic of the song is not very clearly explained and there is not specific evidence that supports it.	The topic of the song has nothing to deal with the song	
MASTERY OF THE SONG	There are not mistakes and the presentation is outstanding.	There are a few mistakes and the presentation is good.	There are many mistakes and the presentation was difficult to understand	There are mistakes all the time and it is impossible to follow the presentation.	
Total Score

Rubric for Poem Writing

Category	4	3	2	1	Points
Meaning and Originality	The poem is creative and original. It is evident that the poet put thought into their words and uniquely conveyed their ideas and emotions.	The poem is thoughtful and creative. A couple of phrases or ideas may be revisited, but the overall product is carefully written.	Most of the poem is creative, but appears to be rushed. This is evident in the poet's redundancy or use of cliches.	Poems appear to be thoughtless or rushed. Work is very repetitive, and ideas are unoriginal.	
Sensory Details	Vivid, detailed images and intensely felt emotion make the poem come alive.	Clear sensory images are used to portray ideas or emotions.	Some use of image, idea, or emotion.	Difficult to visualize image or emotion.	
Form	The poem is complete and follows its intended form, in the style of Pablo Neruda.	The poem is written in its proper forms with a few mistakes.	The poem is somewhat written in its proper form.	The poem is not written in its proper form.
