LESSON EXEMPLAR

Learning Area	EFFECTIVE COMMUNICATION	Grade Level	11
Semester	2 nd	Quarter	3 rd

I. OBJECTIVES	
A. Content Standard	The learners demonstrate effective communication in academic and training contexts through spoken, written, and multimodal forms ; they understand that interaction patterns in academic and training contexts are formal, structured, and discipline-specific, and that intellectual integrity, honest and respectful critique, and inclusive language foster meaningful academic and training engagement.
B. Performance Standard	The learners produce spoken, written, and multimodal academic and technical texts for specific purposes and audiences , such as, but not limited to, articles, research reports, public speaking presentations, reviews, and podcasts; prepare note cards and reference lists in support of these texts; convert these texts into presentation formats aided by non-verbal signals and multimedia tools or resources; and give and use feedback on the content, structure and language of communication to improve performance.
C. Communicative Event/s	Presenting Research Findings or Investigative Reports
D. Learning Competencies	• Interpret data represented in multimodal forms (e.g., charts, tables, figures). • Follow procedures, instructions, or processes in spoken, written, or multimodal forms to successfully achieve outcomes. • Condense spoken, written, or multimodal texts into diagrams, charts, outline, summary, synopsis, or paraphrase. • Review one's readiness to participate in academic and technical communication, identifying strengths and areas for growth.
II. REFERENCES and MATERIALS	Pew Research Center. <i>"Teens and Social Media Fact Sheet."</i> July 10, 2025. Pew Research Center. Accessed September 9, 2025. https://www.pewresearch.org/internet/fact-sheet/teens-and-social-media-fact-sheet/ World Health Organization. <i>"New WHO-Led Study Says Majority of Adolescents Worldwide Are Not Sufficiently Physically Active, Putting Their Current and Future Health at Risk."</i> WHO News, November 22, 2019. III. CONTENT	Interpreting Data and Presenting Information Effectively
IV. OBJECTIVES	At the end of the lesson, the learners are expected to: 1. analyze the effectiveness of different multimodal forms; 2. transform text into multimodal forms (tables, graphs, charts);

- interpret and present data effectively using multimodal forms; and
- reflect on one's strengths and areas for growth in academic communication.

IV. PROCEDURES

ANNOTATIONS

A. Activating Prior Knowledge

Activating Prior Learning

Activity 1: Visualize It! Transforming Text into Data Displays

- To set the mood, ask the students if they have tried presenting information before an audience. Did they use tables and graphs during the presentation? Why did they use tables and graphs?
- Tell the students that in this lesson, they will learn how to present information using tables and graphs.
- First, present a copy of the text: ***“Physical activity trends show slight improvement for boys, none for girls,”*** which can be accessed through this [WHO link](#). Option: You may share the link with the students so that they can access the text. Then ask students to scan for at least 3 important information.
- This time, show students the infographic below, which is the non-linear presentation of the text that they have just read. Then tell students to give at least 3 information from the text.

Note: Figures from 2015 depicted above were collected from 2014 to 2015. Those who did not give an answer are not shown.
Source: Surveys of U.S. teens conducted 2014-2024.

PEW RESEARCH CENTER

In Activity 1, students read a short WHO text about physical activity trends and answer reflective questions, which aligns with the **Instructional Design Framework** and the **Curriculum–Teaching–Assessment** cycle. At the curriculum level, it develops competencies in interpreting informational texts and prepares learners for multimodal communication.

In terms of teaching, it is **responsive** because it uses an authentic, concise, and technology-integrated text; **relevant** as it addresses real-world health issues relatable to students; and **reflective** since it encourages critical thinking about clarity and alternative ways of presenting information.

For assessment, the guiding questions serve a diagnostic role, allowing the teacher to gauge learners' comprehension and analytical skills, thereby ensuring that curriculum standards, teaching strategies, and assessment are meaningfully integrated.

	5. Process the activity by asking the following questions: - Which form is best for showing numbers for easy comparisons? - The text and the chart contained the same information. In what way does each format help you understand the data? 6. Lead to the idea that charts and figures are not just math tools; they are communication tools. Establishing the Purpose of the Lesson - Present the scenario below: <i>“Imagine you are preparing a report on last month’s school activity participation. You need to present the data clearly so your teacher and classmates understand your findings.”</i> - Ask the following questions: - Why is it important to present information clearly? - What could happen if the data is misinterpreted? - Why are we learning this? - In what concrete and practical situations could you’re learning on this be most applied to? - Inform the students in advance of their expected performance task at the end of the lesson.	
B. Instituting New Knowledge	Presenting Examples Activity 2: Reading a Chart Flash on screen the text below: “Factors Why Teenagers Skip Meals” Teenagers often skip meals for different reasons that reflect their lifestyle and daily challenges. Some are too busy with schoolwork or have limited time due to packed schedules, while others avoid eating because of dieting or weight concerns. A few teenagers skip meals when they do not feel hungry or when financial constraints limit their food choices. Knowing these	In Activity 2: Reading a Chart, the use of a social media infographic survey aligns with the curriculum by addressing competencies in interpreting and presenting data in varied multimodal forms of communication. From the teaching perspective, it is responsive because it employs a visual that is both accessible and engaging for teenagers, relevant as it tackles social media usage—an issue closely tied to students’ daily lives, and reflective since the guiding questions push learners to compare text and visuals, evaluate clarity, and draw conclusions, fostering critical

factors helps us see how habits and circumstances influence the eating patterns of young people today.

Below is a table that shows the factors why teenagers skip meals, which was conducted on 50 teenagers.

Reason for Skipping Meals	Number of Teenagers	Percentage
Lack of Time	18	30%
Busy with schoolwork	12	24%
Dieting/Weighing Concerns	8	16%
No Appetite	7	14%
Financial Constraints	5	10%

2. Ask the following questions:
 - What is the table all about?
 - Who is the target audience or population of the data?
 - What insights can you get from the table?
 - Is the result of the data true to you?
3. Show how this same information can be presented as:
 - bar graph
 - pie chart
4. Explain when to use each in communication contexts (e.g., pie charts for proportions, bar graphs for comparisons, tables for detail).

Discussing New Concept

Tables, charts, diagrams, and figures are tools used to present information and data in a clear and organized way. A table arranges details in rows and columns to show exact information and comparisons. Charts (such as bar, line, and pie charts) display data visually, making patterns and trends easier to recognize. Diagrams illustrate relationships, processes, or parts of a whole through shapes, symbols, and labels. Together, these forms make information more understandable by

thinking about how information is best conveyed.

The teacher's follow-up of showing the same data in a table, bar graph, and pie chart further scaffolds learning by demonstrating different communication tools and contexts, making the lesson practical and career-aligned. The questions act as formative checks to gauge comprehension, analysis, and preference for different data forms, while the comparison across formats ensures learners understand not just how to read but also when and why to use each presentation.

transforming complex details into formats that are easier to read, analyze, and interpret.

Interpreting data means guiding the students to go beyond “reading numbers” and instead make sense of what the data shows.

Steps in Interpreting Data

1. Read the title and labels first
 - Ask: *What is this chart/graph/table about?*
 - Look at titles, axis labels, legends, or categories.
2. Identify the type of data representation
 - Is it a bar graph, pie chart, table, or line graph?
 - Knowing the type helps understand how information is organized.
3. Look for trends and patterns
 - Ask: *What increases, decreases, or stays the same?*
4. Compare groups or categories
 - Identify similarities and differences.
 - Example: More teenagers skip meals because they have no time.
5. Focus on significant numbers or proportions
 - Highlight the highest, lowest, or average values.
 - Example: "80% of students exercise less than 3 times a week."
6. Draw a conclusion or insight
 - Go beyond stating facts; explain the meaning or implication.
 - Example: "Since most students report high stress levels, schools may need more mental health support programs."
7. Relate it to a real-life context
 - Connect findings to students' experiences.
 - Example: "This survey reflects how our own class uses TikTok more than Facebook."

Teacher's Note: For a seamless discussion, use the table in Activity 2.

Developing Mastery

Activity 3: Making Meaning with Data

1. Divide the class into four groups.
2. Give each group one of the texts below:

Group 1: *Sources of Stress among Grade 11 Students*

In a recent survey of 30 Grade 11 students, schoolwork and exams emerged as the leading source of stress, with 12 respondents mentioning academic demands as their top concern. Social media pressure was reported by 6 students, while 5 pointed to family-related issues. About 3 said they were most affected by peer pressure, and 2 indicated financial difficulties. Another 2 students mentioned other stressors or did not give a specific answer.

Group 2: *Physical Activity Habits of Grade 11 Students*

When asked how many days per week they engage in physical activity, 10 Grade 11 students admitted they did not exercise at all. Eight said they were active only once or twice a week, while 6 reported exercising three to four times weekly. Four respondents claimed they engaged in physical activities five to six days a week, and only 2 students said they exercised every day.

In Activity 3: Making Meaning with Data, students collaboratively convert survey texts into tables, charts, and short interpretations, which aligns with the **curriculum** standard of presenting and analyzing information through multimodal forms.

The task is **responsive** because it provides differentiated datasets and scaffolds the process from text to visual presentation, **relevant** as the data reflects real-life experiences of Grade 11 students, and **reflective** since learners must evaluate how their chosen formats improve clarity and meaning.

As an assessment, it serves as a formative and performance-based task, allowing students to demonstrate comprehension, application, and critical thinking through group outputs and presentations.

Group 3: Favorite School Subject

A survey of 30 Grade 11 students revealed that English was the most popular subject, chosen by 14 respondents. Mathematics came second with 10 students, while 7 identified Science as their favorite. Physical Education and Health was selected by 6, and only 3 chose Filipino as their top subject.

Group 4: Weekend Activities of Grade 11 Students

In terms of weekend routines, 11 Grade 11 students said they preferred sleeping or resting. Another 10 spent their weekends playing online games, while 8 chose to go out with friends. About 7 students liked watching Netflix or television, and 6 mentioned family bonding as their main weekend activity.

3. Ask them to organize the data into a table first.
4. Then, they must present it in a chart/graph (pie chart, bar graph, etc.).
5. Finally, students should write a short interpretation of 2–3 sentences. Remind the students of the steps in interpreting data.
6. Call representatives from each group to present their output.
7. Process the activity by asking these questions:
 - What changes did you make to improve the dataset?
 - How does your chart/graph make the information clearer?
 - What difficulty did you encounter in converting survey texts into multimodal forms?

**A. Demonstrating
Knowledge and Skills**

Finding Practical Application

Activity 4: Data in Daily Life

1. Provide the students with the text below:

“Hobbies and Interests of Young Adults”

In today’s society, teenagers and young adults engage in a wide variety of hobbies and interests that reflect both traditional pastimes and the influence of modern technology. With the rise of digital platforms, many spend their free time on activities such as online gaming, social media, and streaming movies or series. At the same time, others continue to enjoy reading, sports, music, and creative arts as a way to express themselves and build social connections. These hobbies not only provide relaxation and enjoyment but also shape their skills, identities, and relationships in an increasingly fast-paced and connected world.

A study was conducted on 50 young adults, and the table below shows their hobbies and interests.

Hobbies/Interests	Number of Students	%
Playing Online Game	15	30%
Watching Movies/Series	10	20%
Sports/Exercise	8	16%
Reading Book/Comics	7	14%
Music (listening/singing/playing instruments)	6	12%
Arts and Crafts (drawing, painting, crafts)	4	8%

2. Give students clear, step-by-step directions.
 - **Step 1:** Identify the main trends or patterns.
 - **Step 2:** Summarize the data in a chart or diagram.
 - **Step 3:** Write a 2–3 sentence interpretation of the data.

Activity 4: Data in Daily Life aligns with the SHS Instructional Design Framework. It develops competencies in identifying trends, converting tables into visuals, and summarizing data. The activity is responsive, using multimodal inputs, scaffolded steps, and teacher support to address diverse learning needs. It is relevant, as the topic on hobbies and interests connects to students’ lives and builds real-world communication skills. It is also reflective, encouraging analysis, presentation choices, and peer feedback to promote metacognitive awareness.

As an assessment, it combines formative checks (teacher and peer feedback) with a performance task that demonstrates students’ ability to interpret and present data effectively.

	3. Mill around the room to provide feedback and guidance. 4. Have students share their outputs with a partner for peer feedback. Making Generalization Activity 5: <i>Rules to Remember</i> 1. Divide the class into small groups of five (5) members each. 2. Ask each group to come up with three to five (3–5) rules or guidelines for effective data presentation and interpretation based on what they have learned (e.g., “Always label your chart,” “Choose the right graph for the data,” “Avoid misleading scales”). 3. Have each group write their rules on manila paper or prepare a slide, then present them to the class. 4. As a class, decide on the top five (5) rules and write them on the board. Evaluating Learning Activity 6: <i>Survey in Action</i> 1. Group the students according to their interests (e.g., music lovers, dance enthusiasts, etc.). In small groups, have them create a three-question mini-survey about a topic related to their interests. For example, they might ask about their classmates’ preferred music genres. 2. Ask each group to gather quick responses from 15–20 classmates during class. 3. Instruct them to tally the results and present the data visually using a bar graph, pie chart, or table. 4. Have them write a 2–3 sentence interpretation of the results. 5. Inform the class that their presentation will be graded based on the rubric found in Appendix 1.
--	---

	6. Process the activity by asking the following questions: • What did you learn while gathering and presenting your own data? • Was it difficult to organize the information? Why or why not? Additional Activity Activity 7: Creating Charts and Tables 1. Organize the students into groups of four to five (4–5) members. 2. Ask each group to find a short article or survey result (e.g., an excerpt about students’ study habits, smartphone usage, or favorite school subjects). Encourage them to use reliable local or national data. 3. Give the following instructions: ○ Step 1: Extract key data from the text. ○ Step 2: Present the data in two different multimodal forms (a table and a chart or diagram). ○ Step 3: Write a short interpretation (3–4 sentences) of the data. ○ Step 4: Present your output to the class. 4. After the presentations, ask: <i>“Which form was most effective in conveying the message, and why?”</i>	data collection, visual presentation, and interpretation—while processing questions prompt learners to reflect on their learning experience. Activity 7: Creating Charts and Tables develops students’ ability to transform written information into clear, multimodal data presentations that enhance comprehension and communication. At the curriculum level, it builds competencies in identifying key details, organizing data, and presenting it through tables and charts. The activity is responsive, as students collaborate and select topics of interest; relevant, as it mirrors real-life tasks that require data visualization; and reflective, as learners compare which format communicates information more effectively. As an assessment, students are evaluated on data accuracy, clarity of multimodal presentation, and depth of interpretation.
--	---	--

V. ASSESSMENT

A. Pen-and-Paper Test

Directions: Read each question carefully and encircle the letter of the best answer.

1. Which statement best describes a multimodal text?
 - A. It focuses only on written language to express meaning.
 - B. It uses pictures or visuals without any written words.
 - C. It combines two or more modes such as text, images, or audio.
 - D. It presents information using spoken words only.
2. Which multimodal form is most suitable for showing trends over time?
 - A. Bar graph showing different age groups
 - B. Table comparing student preferences
 - C. Pie chart showing budget distribution
 - D. Line graph showing changes across years
3. If you want to compare quantities across categories, which form is best?
 - A. Pie chart illustrating proportions
 - B. Bar graph comparing several groups
 - C. Line graph showing gradual changes
 - D. Table listing textual descriptions
4. What is one advantage of using a table instead of a paragraph?
 - A. It shortens explanations by removing data.
 - B. It allows quick and clear comparison of information.
 - C. It replaces all written descriptions with numbers.
 - D. It makes a text more decorative and colorful.
5. When showing how a whole is divided into parts, which is best used?
 - A. Table listing numerical data
 - B. Line graph showing upward trends
 - C. Bar graph comparing frequencies
 - D. Pie chart showing percentage shares
6. Why is analyzing the effectiveness of multimodal forms important?
 - A. It ensures the message is clear and easy to understand.
 - B. It helps make the design more attractive and colorful.
 - C. It encourages the use of more complicated data.
 - D. It increases the length of the presentation.

7. During a class report, Carlo used a pie chart that showed how his classmates spend their free time. The audience quickly understood his point. Why was his multimodal form effective?
 - A. It visually showed clear portions of time distribution
 - B. It contained detailed written explanations only
 - C. It used multiple charts for the same data
 - D. It avoided using color to highlight key parts
8. You were given text describing how different fruits are sold weekly in the market. How can you best transform this into a multimodal form?
 - A. Make a timeline of fruit harvest seasons
 - B. Create a bar graph comparing weekly fruit sales
 - C. Write another paragraph summarizing the data
 - D. Design a poster listing fruit names alphabetically.
9. You are asked to evaluate two charts showing the same information. One is colorful but confusing, while the other is simple but clear. Which is more effective?
 - A. The simple and clear chart because it communicates the message easily.
 - B. The colorful chart catches attention faster.
 - C. Both are equally effective because they show the same data.
 - D. Neither, because charts are not needed for the topic.
10. Your teacher asked you to show the increase in your school's enrollment from 2019 to 2024. Which multimodal form will best present the data?
 - A. Pie chart showing the percentage of grade levels
 - B. Table listing student names per grade
 - C. Bar graph showing total enrollees per year
 - D. Diagram showing classroom seating arrangement

Answer Key:

- | | |
|------|-------|
| 1. C | 6. A |
| 2. D | 7. A |
| 3. B | 8. B |
| 4. B | 9. A |
| 5. D | 10. C |

B. Performance Task: *Data in Action — A Mini-Research Presentation*

Goal: Your goal is to present a mini-research report on an issue within your school or barangay that you want to explore or find solutions for (e.g., waste management practices of students, challenges faced by Grade 11 students in adapting to senior high school, tardiness, or track preference among incoming Grade 11 students). Choose a topic that genuinely interests you. You are expected to gather real data, analyze it, and present your findings using multimodal forms such as charts, tables, visuals, and oral presentation.

Role: You are a student-researcher and communication specialist tasked to collect, interpret, and present meaningful data on how students learn or behave in specific contexts.

Audience: Your classmates and teacher will serve as your academic panel. They expect a clear, evidence-based, and engaging presentation.

Situation: Your group will conduct a short survey among at least 20 Grade 11 students in your school. Prepare 5–10 questions related to your chosen issue. After gathering and tallying the data, you must analyze the results and present your findings.

Product/Performance: Deliver a 5-minute multimodal presentation with the following components. Use a simple and readable font style. Avoid unnecessary images or decorations.

- **Slide 1:** Title and name of presenter
- **Slide 2:** Purpose of the survey
- **Slide 3–4:** Steps on how you gathered and tallied the data
- **Slide 5–6:** Charts or graphs with interpretation and at least two key insights from your survey
- **Slide 7:** Recommendations or strategies based on your findings (e.g., ways to improve study habits)

Standard: The rubric in Annex 2 presents the criteria for evaluating your mini-research presentation, which include Data Accuracy, Choice of Multimodal Forms, Presentation and Interpretation, and Visual Presentation and Engagement.

VI. REFLECTION	Directions: Reflect on your lesson delivery and learners' performance through the following questions. These will help you evaluate the effectiveness of your strategies and identify areas for improvement: 1. How many learners achieved a score of 80% in the summative test? 2. Are there learners who require additional activities for remediation? If so, how many? 3. Which of my teaching strategies worked and which didn't work? Why? 4. Which of my teaching strategies work well? Why?
VII. USE OF GENERATIVE AI	In preparing this Lesson Exemplar (LE), the writer used ChatGPT to enhance efficiency, accuracy, and clarity, and Grammarly to check grammar. Authentic texts and data were sourced from reliable websites. While ChatGPT helped simplify ideas, the lesson structure and activities were independently designed to align with the Instructional Design Framework (IDF). The writer reviewed and finalized all content and takes full responsibility for the LE.

Appendix 1: Rubric for Activity 6

Criteria	Excellent (3 pts)	Proficient (2 pts)	Needs Improvement (1 pt)	Score
Survey Questions	Clear, relevant, and easy to answer. Complete 5 questions.	Somewhat clear. 2-4 questions	Questions unclear.	
Data Collection	Gathered at least 15-20; tally accurate.	Gathered fewer than 10-14 responses or minor tally errors.	Very few responses; fewer than 10 or tally inaccurate	
Visual Presentation	Data is presented in a clear chart, table, or graph, easy to read	Data is presented, but somewhat unclear or incomplete.	No visual or very unclear presentation.	
Interpretation	Provides 2-3 clear sentences that correctly explain findings.	Provides 1-2 sentences with partial explanation.	No explanation or inaccurate interpretation.	
TOTAL				

Appendix 2: Rubric for the GRASPS

Criteria	Excellent (4 pts)	Proficient (3 pts)	Developing (2 pts)	Needs Improvement (1 pt)	Score
Data Accuracy	All data are correct, complete, and accurately presented in tables and charts.	Data are mostly correct with only minor errors.	Some data are missing or contain noticeable errors.	Data are mostly incorrect or incomplete.	
Choice of Multimodal Forms	Tables and charts used are highly appropriate for the type of data and purpose.	Tables and charts are appropriate but could be better matched to the data.	Only one form is used, or the form is somewhat mismatched to the data.	The forms used do not fit the data or purpose at all.	
Presentation and Interpretation	Presenter clearly explains what the tables/charts show and draws meaningful conclusions.	Explanation is mostly clear and shows understanding of the data.	Explanation is unclear or incomplete; conclusions are weak.	Presenter cannot interpret or explain the data correctly.	
Visual Presentation and Engagement	Presentation is neat, visually appealing, and engages the audience effectively.	Presentation is clear and neat with minor design issues.	Presentation is somewhat messy or lacks visual appeal.	Presentation is disorganized and difficult to follow.	
TOTAL
